---

Classrooms and offices in the AUA buildings are equipped with air-conditioning and ventilation equipment. The regular temperature range during the heating season and cooling season in AUA buildings are set in the range of 22-24o C and 20-23o C correspondingly.

In the spirit of energy efficiency, AUA community members should:

1. Keep office/classroom doors and windows closed during A/C operation,
2. Use only the remote control and do not press any button on the A/C unit itself, as it can damage the A/C unit.

For assistance, please contact the AUA Facilities by sending an e-mail to [building.management@aua.am](mailto:building.management@aua.am). The central heating period of AUA typically runs from November through March.
